MARYLAND *Office of Planning*

1990 & 1980 POPULATION AND HOUSING CHARACTERISTICS FOR STATE, COUNTIES AND BALTIMORE CITY

The U.S. Bureau of the Census released the first 1990 census summary tape file (STF-1A) for Maryland on May 14. This release includes the detailed age, race and sex distribution of the population as well as household status, housing tenure, vacancy and value/rent information. The tape file includes counts for all geographic levels down to the block group.

The Maryland Office of Planning has created this two page profile report for the state, counties and Baltimore City. It includes selected 1990 census population and housing characteristics available on STF-1A in comparison with comparable data from the 1980 census.

The 1990 counts shown in the profile are subject to possible correction for undercount or overcount. The U.S. Department of Commerce is considering whether to correct these counts and will publish corrected counts, if any, not later than July 15, 1991.

The Maryland State Data Center is producing detailed printed profiles from the 1990 census STF-1A tape for states, counties and places. The profiles can also be generated for minor civil divisions and census tract/block numbering areas. Diskette files with selected characteristics from the 1980 census and 1990 census STF-1A tape file will also be available. For more information on the STF-1A profiles and diskette data products contact the Maryland State Data Center at (301) 225-4450.

Census of Population and Housing
State of Maryland, 1980 to 1990 Trends

1. Females which had been an increasing share of the total population from 1970 to 1980 (51.2 percent to 51.6 percent) actually declined slightly to 51.5 percent in 1990. This may, in part, be due to special efforts in the 1990 census to count males who are traditionally undercounted (e.g. parolees and probationers).

2. The school age population 5-17 which had declined from 1,037,160 in 1970 to 895,256 in 1980 continued to decline by an additional 90,833 to 804,423 in 1990. Elementary school age population, however, has already begun to increase and the school age population will continue to increase as the large number of persons under five enter school in the 1990s. Persons under five equal 357,818 compared to just 272,274 in 1980, reflecting the baby boomlet of the 1980s versus the baby bust of the 1970s.

3. Persons ages 25-44 increased by 34 percent from 1,252,646 in 1980 to 1,677,104 in 1990 reflecting the full impact of the maturing baby boom population. The baby boom population is now the major component of the work force, 25-44 year olds represent 54 percent of persons ages 18 to 64 in 1990.

4. Persons 65 years and over increased by 121,873 or 31 percent representing 517,482 persons in 1990. The aging of Maryland's population continues as the elderly become a larger component of the total population both in absolute numbers and in percent share. The fastest growing age cohorts are persons 85 years of age and older, an increase of 42 percent or 13,831 to 46,496 persons in 1990.

5. Persons in group quarters increased by 19,428 from 1980 to 1990 to a total of 113,856. Ninety-three percent of this increase is due to an increase in the institutional group quarters population (due to increases in persons in correctional institutions and the elderly in nursing homes).

6. While married couple families increased by 9.9 percent to 948,563 (reflecting household formation by the baby boom generation), they continue to decline as a share of total households, 54.2 percent in 1990 compared to 59.1 percent in 1980. Single-parent households continue to increase in numbers. For example, female headed family households increased by 50,801 to 231,889 in 1990 and now represent 13.3 percent of all households compared to 12.4 percent in 1980. Also non-family households increased by 35.5 percent or 131,871 to 503,177 in 1990 with 90,365 of this increase in single person households (in 1990, 394,572 or 22.6 percent of all households are single person households).

7. The dominant type of new housing construction during the 1980s was single-family housing. Of the 321,010 total increase in housing units from 1980 to 1990, 266,229 is attributable to single family construction. Of the new single unit, 40 percent was attached housing, reflecting the need for more affordable single family units.

8. The percent of total housing units that are owned versus rented increased from 57.6 percent to 60.1 percent. This reflects the maturing of the baby boom households and their preference for home ownership (specifically single-family homes).

9. Vacant units increased by 32,884 to 142,926, reflecting in part, increases in seasonal, recreational and occasional use housing (42,268 units in 1990). While the homeowner vacancy rate increased very little from 1980 to 1990 (1.5 percent to 1.6 percent), the rental vacancy rate increased from 5.5 percent to 6.8 percent. At the same time, the average number of persons per renter occupied unit declined only slightly (from 2.46 to 2.45). This may reflect more doubling up of families and unrelated individuals in rental housing as well as more families with children in rental housing. The trend in household size of owner occupied housing continued downward from 3.05 in 1980 to 2.79 in 1990.

10. The number of "crowded" housing units (with over one person per room) increased from 44,824 in 1980 to 53,139 in 1990 or at nearly the same rate of increase as total occupied units. This is in contrast to the 1970s when crowded units decreased by 32,764 (from 77,588 in the 1970 census to 44,824 in the 1980 census). Since crowding is more prevalent in rental units, this explains, in part, why average household size changed so little from 1980 to 1990.

11. The median value of owner occupied housing units increased by 97 percent from $59,200 in 1980 to $116,500 in 1990 (current dollars). Housing units valued at over $200,000 represent 168,825 or 17.4 percent of the total. By contrast in 1980, housing units valued at $100,000 or more represented 100,439 units or 13.4 percent of the total. This represents a sizeable increase (about 68 percent) from 1980 to 1990 in higher valued housing units.

12. The median monthly rent increased by 113 percent from $222 in 1980 to $473 in 1990. This rate of increase exceeded the rate of increase in the value of owner-occupied housing units, making rental units "less" affordable. This may explain, in part, the increase in the rental vacant rate, the higher than expected average number of persons per rental unit, and the increase in crowded units.

COMPARISON OF POPULATION AND HOUSING CHARACTERISTICS FROM THE 1990 AND 1980 CENSUSES - State of Maryland

The 1990 population counts set forth herein are subject to possible correction for undercount or overcount. The United States Department of Commerce is considering whether to correct these counts and will publish corrected counts, if any, not later than July 15, 1991.
